Discharge Time : 20 seconds
Working Pressure : 12 Bar

FIRE DETECTION

Addressable Fire Alarm Panel

250 device detectors and modules in each loop
64/128/512 completely programmable
Software zones 16 programmable open-collector
Outputs RS485 Interface for the connection
of up to 8 FC200/REP Repeaters
and up to 8 panels

Response Indicators

Maximum volt. : 24volt.

Addressable Fire Alarm Panel

EN54 approved by LPCB
Low operational voltage : 10.5V to 33V
Integrated alarm led Remote led connection
Compatible with standard mounting base
and with relay base

Manual Call Point

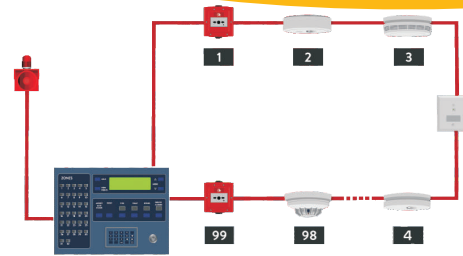

Maximum volt. : 24volt.
Maximum Current : 4 amps

Hooter

Maximum volt. : 12/24volt.
Maximum Current : 4 amps
Sound Levels : 90-120/db

Fire Alarm Panel

Fire Alarm System is designed to alert us to an emergency so that we can take action to protect ourselves, staff and the general public.

Fire alarms are found in Offices, Factories, and public buildings, they are a part of our everyday routine but are often overlooked until there is an emergency at which point, they might just save our lives.

Whatever the method of detection is, if the alarm is triggered, sounders will operate to warn people in the building that there may be a fire and to evacuate.

The fire alarm system may also incorporate a remote signal system which could then alert the fire brigade via a central station.

So what is a fire alarm system, or fire detection system? In this article, we will have a look at the structure and types of the "Fire Alarm Systems".
